

Code:

```
import numpy as np

# Student marks
student_scores = np.array([
    [85, 78, 90, 88],
    [92, 81, 85, 79],
    [76, 89, 84, 91],
    [88, 95, 92, 86]
])

# Calculate average of each subject
average = np.mean(student_scores, axis=0)

subjects = ["Math", "Science", "English", "History"]

print("Average marks of each subject:")

for i in range(4):
    print(subjects[i], ":", average[i])

# Find highest average
highest = np.argmax(average)

print("\nSubject with highest average:", subjects[highest])
print("Highest average:", average[highest])
```

Output:

```
== RESTART: C:/Users/A. MOUNESH/AppData/Local/Programs/Python/Python3
Average marks of each subject:
Math : 85.25
Science : 85.75
English : 87.75
History : 86.0

Subject with highest average: English
Highest average: 87.75
```
