

Code:

```
import pandas as pd

data = pd.DataFrame({
    "Age": [20, 25, 25, 30, 30, 30, 35, 40, 40]
})

frequency = data["Age"].value_counts().sort_index()

print("Age frequency distribution:")
print(frequency)
```

Output:

```
== RESTART: C:/Users/A. MOUNESH/AppData/Local/Pro
Age frequency distribution:
Age
20    1
25    2
30    3
35    1
40    2
Name: count, dtype: int64
```
