

Code:

```
import pandas as pd

order_data = pd.DataFrame({
    "CustomerID": [101, 102, 101, 103, 102, 101],
    "OrderDate": ["2026-01-05", "2026-01-10", "2026-01-15",
                  "2026-01-20", "2026-01-25", "2026-01-30"],
    "Product": ["Laptop", "Phone", "Phone", "Laptop", "Tablet", "Laptop"],
    "Quantity": [1, 2, 3, 1, 2, 2]
})

order_data["OrderDate"] = pd.to_datetime(order_data["OrderDate"])

print("Orders by customer:")
print(order_data.groupby("CustomerID").size())

print("\nAverage quantity by product:")
print(order_data.groupby("Product")["Quantity"].mean())

print("\nEarliest date:", order_data["OrderDate"].min())
print("Latest date:", order_data["OrderDate"].max())
```

Output:

```
== RESTART: C:/Users/A. MOONESH/AppData/Local/Programs/Python/Python314/1
